To Whom It May Concern:

Our apartment complex at Moore Park Gardens was experiencing very slippery conditions in our gymnasium area and main entrance. Approximately 6 months ago we then had our slippery areas treated for safety by a company called Global Safe Technologies. They applied a product called the Safe Solution to the floor. After the application of the Safe Solution treatment these slippery conditions were completely resolved. When the Body Corporate Committee came to inspect the work after a big rain that flooded the entrance, they were very impressed with the anti slip quality of the floor. The same people were called back in late November after our swimming pool was renovated and retiled. The pool surfaces on the stairs were very slippery. The Safe Solution treatment amazed me as the stairs which are constantly covered with water and previously were very slippery are now completely safe.

We were also introduced to their cleaning product; the Maintenance Solution. We are very impressed with this product as well; not only for the gymnasium area, but for many other cleaning tasks and recently have ordered more for all of our external and internal floor cleaning. We've also found that the product cleaned other surfaces, including carpet very effectively.

For anyone considering using these products and services, I would highly recommend them.

Sincerely yours,

Mike Bonenti

Director

Moore Park Gardens Management
