Re “Safe Grip” Non-slip Flooring at Pastabilities

A few years ago we had Safe Grip applied to the floor of our food manufacturing (fresh pasta) factory by Tibor Bode of Global Safe Technologies.

Tibor came to our rescue after our original so called “non-slip” floor failed hopelessly. Down time and the enormous mess caused by sanding floors prior to *conventional* resurfacing is a big problem for a business such as ours producing fresh food six days a week.

Preparation of the floor for the “Safe Grip” product, however, does not involve sanding i.e. no mess, and the product can be quickly applied and be ready for walking on in a matter of hours. No down time waiting for days for the product to harden is a great advantage, not to mention avoiding the nightmare of dust from sanding.

We have had Safe Grip on our floors now for over three years and find it to be very durable with no apparent loss at all of it’s non slip properties. We started with the product on our main walkways and work areas, but now have extended it throughout the factory to include cool rooms and freezers. Tibor has offered great service and help with ideas for certain problem areas specific to our operation as well as excellent after sales service.

I recommend both the Safe Grip product and the company Global Safe without reservation, it has been a pleasure to do business with them.
