TO WHOM IT MAY CONCERN

Hadlow Preparatory School and the attached Hadlow Pre- School – Masterton, have predominantly wooden decks and ramps around the school classrooms and grounds, which become slippery in wet weather.

We were looking for a product that would not only make the wooden decks and ramps safe without causing any further problems for our staff or pupils, but also in a colour that would complement our overall building colour scheme. Global Safe Technologies NZ offered the ideal solution. Whilst they had a range of non slip products, we decided to go with their environmentally friendly water based polyurethane Floor Tuff Green to remedy the problem. And remedy the problem, they did!

We are extremely pleased with the overall effect on the wooden surfaces, which is both visually pleasing as well as non slip and would have no hesitation in recommending this treatment to anyone concerned with potentially slippery surfaces.

The work undertaken was carried out promptly and efficiently with the provider being very accommodating with the timeframes, working outside school terms to avoid any disruption to our staff or pupils.

We are extremely happy and impressed with the work that they have done and would be happy to act as verbal referee should anyone wish to discuss this with us.
