TO WHOM IT MAY CONCERN

The entrance and steps to the Michael Fowler Centre were very slippery in the wet and there was some concern that visitors to the centre could slip and injure themselves.

Global Safe Technologies were approached to find a solution – namely their product, Safe Solution. This was applied and the results are amazing. The steps and entranceway to the Centre are now safe in any conditions, and we now no longer have to worry about the risk to both customers and staff when the surface is wet.

We are more than satisfied with this product and will undertake more coverage in this year. We would highly recommend Global Safe & their products.

Yours sincerely

Neville Brown
General Manager
